

Directions For Pedalo Grout Cleaning System

The Pedalo Grout Cleaning System works great on most medium to large floors, with the proper use, you could save 30% to 50% of grouting time, off your knees with no wet hands.

Sponges should last about 5000 sq. ft.; when used on most smooth type tiles. Sponges are easily replaced, and extra sponges, handles, and poles are available, this allows more than one person to use the system at the same time.

For the best results:

Fill basin ½" above lower metal grid.

Pre-soak your sponges before use.

Pull sponge in backwards motion. Cleaning stroke must be at 45 degrees to your grout joints. Curl upwards on last portion of stroke, using rounded portion of sponge to keep joints full.

Rinse sponge on lower metal grid, (in water). Then raise sponge to upper level and press metal hub under the black roller. Step on spring bar for final rinse. (Rinse as thorough as possible).

Some of our customers believe you should clean floor immediately after grouting. (We will leave that up to you)
